

VEGEMILK - Series

THE RICHNESS OF MILK AND THE ESSENCE OF PLANTS

Plant milks are an excellent source of fatty acids, minerals and vitamins, precious elements to maintain healthier, younger and protect the skin from damage caused by sun exposure and from environmental pollutants. Besides vegetal milks, in the form of topical solutions, are an excellent treatment for dry, flaky skin and regulate the amount of oil secreted by the sebaceous glands reducing oily skin and acne. Unfortunately vegetal milk are often difficult to get in a stable form.

Phenomena of separation, precipitation and deterioration of water-soluble and oil-soluble components alter their characteristics limiting the use in the cosmetics industry.

Naturalis "Vege-Milks" are reconstituted and stabilized plant milks that mimic the properties of vegetal milk. In Vege-Milks, water-soluble and oil-soluble components of plant are combined together in a fluid gentle and milky-like emulsion that maintain the same properties of the original plant milk, without solvents and ethoxylated surfactants.
